

POLMEX Silicone Key Buttons for Remote

www.polmex.com.au

About Our Products

Our product is 100% Australian Made from the point of inventing it in early 2008, through to designing, tooling and manufacturing process.

Since introducing our product to the market in mid 2008 starting with Silicone Replacement Buttons for Holden Commodore, due to public demand more button replacements were designed and manufactured. Today our products are delivering the most economical solution to repairing of Worn car remote key buttons.

Majority of our products especially ones considered to be revolutionary designs are Registered Designs for copyright protection.

Our Products are made from German, high quality, medical grade Silicone (LSR).

(LSR) Silicone that we are manufacturing our buttons from is the only material that does not degrade over period of time. It offers high stability to ozone and ultraviolet light, excellent weather resistance and most of all outstanding ageing behaviour. Under normal operating atmospheric conditions, according to the supplier of the raw material, product will last over 100 years.

Original buttons and other replacement buttons are made from elastomers that break down as they age. The oily substance that is released during breaking down process, clogs up switches in your remote, making it difficult to use. This will not occur with Polmex made (LSR) Silicone Buttons / Pads.

Our products have been tested by large number of users in various conditions over period of time and have been overwhelmingly applauded. You can trust its quality proved by an excellent feedbacks.

Polmex Silicone Buttons Will Outlast original and other replacement buttons Many Times Over.
