For Orders please visit us on line at [www.polmex.com.au](http://www.polmex.com.au)

Our replacement Buttons are made from LSR Silicone and will not break due to deteriorating effects of sunlight, water and chemicals commonly encountered in service such as Detergent, Oil, and Methanol. **Silicone buttons are flexible and will not deform, change shape, degrade and break over period of time. They are much more durable than originals and are designed to Last.**

Use scalpel to prise remote open on the split line. You end up with bottom part electronic board and top part with plastic button shell.

Using a flat screw driver, carefully lift and “shave” off old buttons from plastic casing.

Next smooth edges of the buttons cut out using scalpel or Stanley knife. Gently scrape off rubber remnants from the ledge of the button cut out.

Next put your remote together in reverse order. You will be inserting your new buttons from outside of remote.

Press in new buttons. Once buttons inserted, your remote is ready for use. There is no need for re-programming or coding to your car. Your refurbished remote will look like the one on the left hand side.
